

MINING TRUCK RADIATOR SERIES

宽体矿用自卸车散热器

功能

1. 利用在发动机附带风扇的强制风冷，将增压后的高温空气、油路系统运行后的高温高压油、水路系统冷却发动机的高温冷却水等冷却到合适的温度；
2. 散热芯体采用板翅式结构，真空焊接芯体工艺，能够在不增加散热器体积的情况下增加有效散热面积；
3. 合理的结构设计，可减小散热器与中冷器之间的距离，提高可靠性，应对各种复杂特殊工况。

FUNCTION

1. Use forced air cooling with a fan attached to the engine to cool the super-charged high-temperature air, the high-temperature and high-pressure oil after the oil system is running, and the high-temperature cooling water of the water system to cool the engine to a suitable temperature;
2. The heat dissipation core adopts a plate-fin structure, and the vacuum welding core technology can increase the effective heat dissipation area without increasing the volume of the radiator;
3. Reasonable structural design can reduce the distance between the radiator and the intercooler, improve reliability, and deal with various complex and special working conditions.

适配车型 Applicable models	风扇 Fan	膨胀水箱 Expansion tank	换热芯体尺寸 Core size
宽体矿用自卸车、重卡等 Wide-body mining dump trucks, heavy trucks, etc	直驱风扇、液压风扇或硅油离合风扇 Direct drive fan, hydraulic fan or silicone oil clutch fan	建议增加 Recommend to equip	1800x1200x160 (最大尺寸 max)

► Can be customized or customized according to customer requirement.
可根据客户需求选配或定制。

关键零部件

1. 导风罩
2. 防回流板
3. 框架组件
4. 橡胶垫组件
5. 散热器
6. 空空封条中冷器

KEY COMPONENTS

1. Air guide hood
2. Backflow prevention board
3. Frame components
4. Rubber pad assembly
5. Radiator
6. Air seal intercooler
